

Future-Science Technology: A New Operating System for Humans and Planet Earth

Elliott Maynard, PhD
Arcos Cielos Foundation

Future-Science Technology is the quantum-field science for the future – a Master Paradigm for humans and Planet Earth. This Master Paradigm is broken down into 25 keys which make up the basic fabric of Future-Science Technology - with each key representing a different pathway for creating connections between left-brained logical thinking and right-brained intuitive thinking. It is this logical left-brained perspective that has dominated western thinking since the invention of the Gutenberg Press in 1440, an invention which ushered in the age of mass media, thus making reading and writing a new factor for human success and survival.

Mainstream scientific paradigms are based on hard facts, generated from a logical thinking perspective. The basis for “hard science” thus dictates we believe nothing we cannot prove to be true through measurements, replication and mathematical validation. The overemphasis on facts, formulations and replications has led establishment scientists and world leaders to support institutions that focus on compartmentalization, overspecialization and compilation of information. This approach dominates most of our existing scientific, governmental and military organizations, since the bulk of research funding is focused on supporting organizations, instead of brilliant individuals or new ideas and emerging breakthrough technologies.

From the new perspective of Future-Science Technology, we need only to make a shift in our consciousness -- from the established linear framework of “*not believing anything we cannot prove to be true,*” to “*not disbelieving anything we cannot prove to be untrue.*” Yes, it’s that simple. Just be willing to open yourself up to receiving information and working with the Universal Quantum Field. I guarantee you will be amazed at how things begin to work for you in entirely new ways.

Historically speaking, what we think of as “modern technology,” has existed for a mere eye-blink on the greater historical timescale – since the beginning of the industrial revolution in the 18th Century. By contrast, right-brained intuitive approaches to science, medicine and the arts have been essential elements of Native American and Eastern philosophies for thousands of years. The great scientists, artists, musicians, mystics and visionaries of the European Renaissance were only able to break through the restrictive logic-based paradigms of their times because their creative achievements in science, art and music were so obviously brilliant that it became “fashionable” for the Church and heads of state to support them and thus gain an extra bit of fame for themselves. What was created was essentially “an offer they could not possibly refuse.”

This same creative persistence for working outside hard-science protocols is alive and well today. Otherwise, we would not have Microsoft, Apple, Yahoo, Facebook, Tesla Motors

and countless other paradigm breakers. Remember that most of the key innovators of these new paradigm companies worked with little support or encouragement, often in garage workshops and against daunting resistance from established institutions. What did they all have in common? They believed in themselves and in their innovative creations. They pushed on against all odds. They defied establishment logic to “search” in deference to logical “research” and endless data-churning. Their success became so glaringly apparent it became uncomfortable for establishment scientists to continue ignoring their work.

Success speaks for itself! Genius speaks for itself! These innovative concepts were only successful because modern geniuses transformed their visions into practical working models, such as the basic hardware and software innovations of Microsoft and Apple Computers, systems now so deeply imbedded in our lives that we accept them without thinking. They forced naysayers to shut up and “get with the program,” because their positions of resistance no longer benefited them.

Neo-Renaissance thinking embodies the concept of learning to use both hemispheres of the brain synergistically, with regard to man’s relationship to Nature and to human society in general. What this accomplishes is to go back on the evolutionary time-scale to the point where the bi-hemispherical structure of the human brain was created. At that time the human brain was shaped by the major drives for survival and success in what was essentially a wilderness environment.

When humans made the shift from hunter-gatherers into agriculture, a new mindset emerged. This new perspective put man more in touch with his social environment. He abandoned his former nomadic ways and became engaged in the responsibilities of planting, harvesting and storing crops for the winter. This new routine encouraged the formation of permanent villages and allowed more time for the sharing of wisdom, development of new trades and cultural exchange.

In contrast to this gradual shift experienced by our ancient relatives, our lives in the present are inundated by lightning-paced developments in computer technologies, communications and the global internet. These recent shifts have forced our personal perspective to expand exponentially. Thus, the worldview of our parents’ and grandparents’ generations has grown from a few square miles to encompass the entire planet. Recent developments in space sciences and related digital technologies have also served to extend the scope of human consciousness, to reach out across vast inter-stellar distances to even the most distant galaxies. This quantum expansion and evolution of the human external perspective has been reflected back in corresponding shifts which have profoundly changed the fundamental nature of human consciousness itself. With the advent of Earth-orbital satellite technology, lunar, planetary and interstellar probes and space observatories like the International Space Station (ISS) and the Hubble Telescope, the Planetary Consciousness Field (Global Brain) has undergone a corresponding expansion in its self-awareness.

Future-Science Technology represents a new operational protocol for the human race. It implies a major shift from a past-based, “rear-view mirror” perspective into a present and future-thinking perspective. This Master Paradigm embodies the key components of both

evolution and transformation as “catalytic change-agents” and implies a shift from local and national perspectives into an entirely new, spherical consciousness framework. This new consciousness framework is truly global, as it highlights the future of humans and their interrelationships with Planet Earth. It also acknowledges the greater extraterrestrial community, and embraces the hope that the human race will become enlightened enough to be invited to participate with extraterrestrials in meaningful exchanges of wisdom, trade, advanced technology and cultural exchange.

The time has arrived in Earth’s evolutionary development for the new thinkers of all nations to make the quantum shift, from a regional and national perspective to a fresh new planetary and intergalactic consciousness. Our technology has reached the point where we can either choose to enhance – or continue to systematically destroy – the delicate balance of the natural forces which sustain our global biosphere. If mankind can fully understand the critical priorities of ecological preservation, restoration and enhancement as prerequisites for the survival and success of our now and future generations, humanity will have achieved a profoundly important transition into an entirely new and unprecedented phase of its evolutionary journey.

This is a journey of quantum transformation into a brave new mindset. This is the wondrous journey of Future Man – *Homo novus*. So, welcome to the Quantum Theater of Dreams., the “Real Reality Show.” The footlights are dimming. The audience waits in hushed expectation. The curtain is beginning to rise. Are you ready to expand your own brave new mind? If so., prepare for liftoff, and welcome to the Future. Your adventure in quantum-field thinking has just begun!
