Ethics in a Historical View & A Framework for Ethical Decision Making

Patrick Williams

We can look back to the early theories of ethics from Socrates and later Kant and others having to do with general moral and ethical behaviours for humans. And then as business and professions began to evolve there was reference to ethical practice of trades, and of professional societies as they developed (accountants, lawyers, etc). Indeed, much of coaching today has borrowed from the concept of Socratic dialogue, but remember, he was sentenced to death by poison essentially for upsetting the community by teaching young persons to ask a lot of questions of themselves and their parents. You can imagine how that went over in early Greek society.

Nevertheless, we can look to Socrates as an early coach of sorts and later on Aristotle as well. Both men set the stage for all ethical guidelines that evolved in professions over centuries (See Ethical Maturity in the Helping Professions, Carroll and Shaw)

Five Sources of Ethical Standards

The Utilitarian Approach
Some ethicists emphasize that the ethical action is the one that provides the most good or does the least harm, or, to put it another way, produces the greatest balance of good over harm. The ethical corporate action, then, is the one that produces the greatest good and does the least harm for all who are affected-customers, employees, shareholders, the community, and the environment. Ethical warfare balances the good achieved in ending terrorism with the harm done to all parties through death, injuries, and destruction. The
utilitarian approach deals with consequences; it tries both to increase the good done and to reduce the harm done.

**The Rights Approach**
Other philosophers and ethicists suggest that the ethical action is the one that best protects and respects the moral rights of those affected. This approach starts from the belief that humans have a dignity based on their human nature per se or on their ability to choose freely what they do with their lives. On the basis of such dignity, they have a right to be treated as ends and not merely as means to other ends. The list of moral rights—including the rights to make one’s own choices about what kind of life to lead, to be told the truth, not to be injured, to a degree of privacy, and so on—is widely debated; some now argue that non-humans have rights, too. Also, it is often said that rights imply duties—in particular, the duty to respect others’ rights.

**The Fairness or Justice Approach**
Aristotle and other Greek philosophers have contributed the idea that all equals should be treated equally. Today we use this idea to say that ethical actions treat all human beings equally—or if unequally, then fairly based on some standard that is defensible. We pay people more based on their harder work or the greater amount that they contribute to an organization, and say that is fair. But there is a debate over CEO salaries that are hundreds of times larger than the pay of others; many ask whether the huge disparity is based on a defensible standard or whether it is the result of an imbalance of power and hence is unfair.

**The Common Good Approach**
The Greek philosophers have also contributed the notion that life in community is a good in itself and our actions should contribute to that life. This approach suggests that the interlocking relationships of society are the basis of ethical reasoning and that respect and compassion for all others—especially the vulnerable—are requirements of such reasoning. This approach also calls attention to the common conditions that are important to the welfare of everyone.
This may be a system of laws, effective police and fire departments, health care, a public educational system, or even public recreational areas.

**The Virtue Approach**

A very ancient approach to ethics is that ethical actions ought to be consistent with certain ideal virtues that provide for the full development of our humanity. These virtues are dispositions and habits that enable us to act according to the highest potential of our character and on behalf of values like truth and beauty. Honesty, courage, compassion, generosity, tolerance, love, fidelity, integrity, fairness, self-control, and prudence are all examples of virtues. Virtue ethics asks of any action, "What kind of person will I become if I do this?" or "Is this action consistent with my acting at my best?"

**Putting the Approaches Together**

Each of the approaches helps us determine what standards of behavior can be considered ethical. There are still problems to be solved, however.

The first problem is that we may not agree on the content of some of these specific approaches. We may not all agree to the same set of human and civil rights.

We may not agree on what constitutes the common good. We may not even agree on what is a good and what is a harm.

The second problem is that the different approaches may not all answer the question "What is ethical?" in the same way. Nonetheless, each approach gives us important information with which to determine what is ethical in a particular circumstance. And much more often than not, the different approaches do lead to similar answers.
Making Decisions

Making good ethical decisions requires a trained sensitivity to ethical issues and a practiced method for exploring the ethical aspects of a decision and weighing the considerations that should impact our choice of a course of action. Having a method for ethical decision making is absolutely essential. When practiced regularly, the method becomes so familiar that we work through it automatically without consulting the specific steps.

The more novel and difficult the ethical choice we face, the more we need to rely on discussion and dialogue with others about the dilemma. Only by careful exploration of the problem, aided by the insights and different perspectives of others, can we make good ethical choices in such situations.

We have found the following framework for ethical decision making a useful method for exploring ethical dilemmas and identifying ethical courses of action.

A Framework for Ethical Decision Making

Recognize an Ethical Issue

1. Could this decision or situation be damaging to someone or to some group? Does this decision involve a choice between a good and bad alternative, or perhaps between two "goods" or between two "bads"?
2. Is this issue about more than what is legal or what is most efficient? If so, how?

Get the Facts

3. What are the relevant facts of the case? What facts are not known? Can I learn more about the situation? Do I know enough to make a decision?
4. What individuals and groups have an important stake in the outcome? Are some concerns more important? Why?
5. What are the options for acting? Have all the relevant persons and groups been consulted? Have I identified creative options?

**Evaluate Alternative Actions**

6. Evaluate the options by asking the following questions:

- Which option will produce the most good and do the least harm? (The Utilitarian Approach)
- Which option best respects the rights of all who have a stake? (The Rights Approach)
- Which option treats people equally or proportionately? (The Justice Approach)
- Which option best serves the community as a whole, not just some members? (The Common Good Approach)
- Which option leads me to act as the sort of person I want to be? (The Virtue Approach)

**Make a Decision and Test It**

7. Considering all these approaches, which option best addresses the situation?
8. If I told someone I respect—or told a television audience—which option I have chosen, what would they say?

**Act and Reflect on the Outcome**

9. How can my decision be implemented with the greatest care and attention to the concerns of all stakeholders?
10. How did my decision turn out and what have I learned from this specific situation?

*This framework for thinking ethically is the product of dialogue and debate at the Markkula Center for Applied Ethics at Santa Clara University. Primary*
